Are you in need of ISO 80369-7 compliant connectors? Nordson MEDICAL’s standard product base has over 700 different types of luers that can be customized to achieve compliance. Being a 10-year veteran in the committee, we have gained deep expert knowledge in developing these products.

LEARN MORE AT NORDSONMEDICAL.COM

The International Organization for Standardization (ISO) published the ISO 80369-1 standard in 2010 providing general requirements to prevent misconnections between small-bore connectors used in various applications. The ISO 80369-7 standard replaces ISO 594-1 and 594-2 standards by modifying the traditional luer and defining multiple dimensions for various styles.

Nordson MEDICAL has participated in the ISO 80369 committee for years, and can support all of your 80369 compliant connector needs. Check out our products, drawings, and quality standards on our website, and request a free sample to see for yourself.

Our ISO 80369 experts are available to answer all your ISO 80369-7 questions. Whether you have design challenges or you want the latest news, we are here to talk to you. Contact us to schedule an appointment with our knowledgeable staff.
